

SecureCheck: A Python-SQL Digital Ledger for Police Post Logs

Naveenkumar Sivakumar

Problem statement:

Police check posts require a centralized system for logging, tracking, and analyzing vehicle movements. Currently, manual logging and inefficient databases slow down security processes. This project aims to build an SQL-based check post database with a Python-powered dashboard for real-time insights and alerts.

Methods to be used :

- Python,
- SQL,
- Streamlit

Domain :

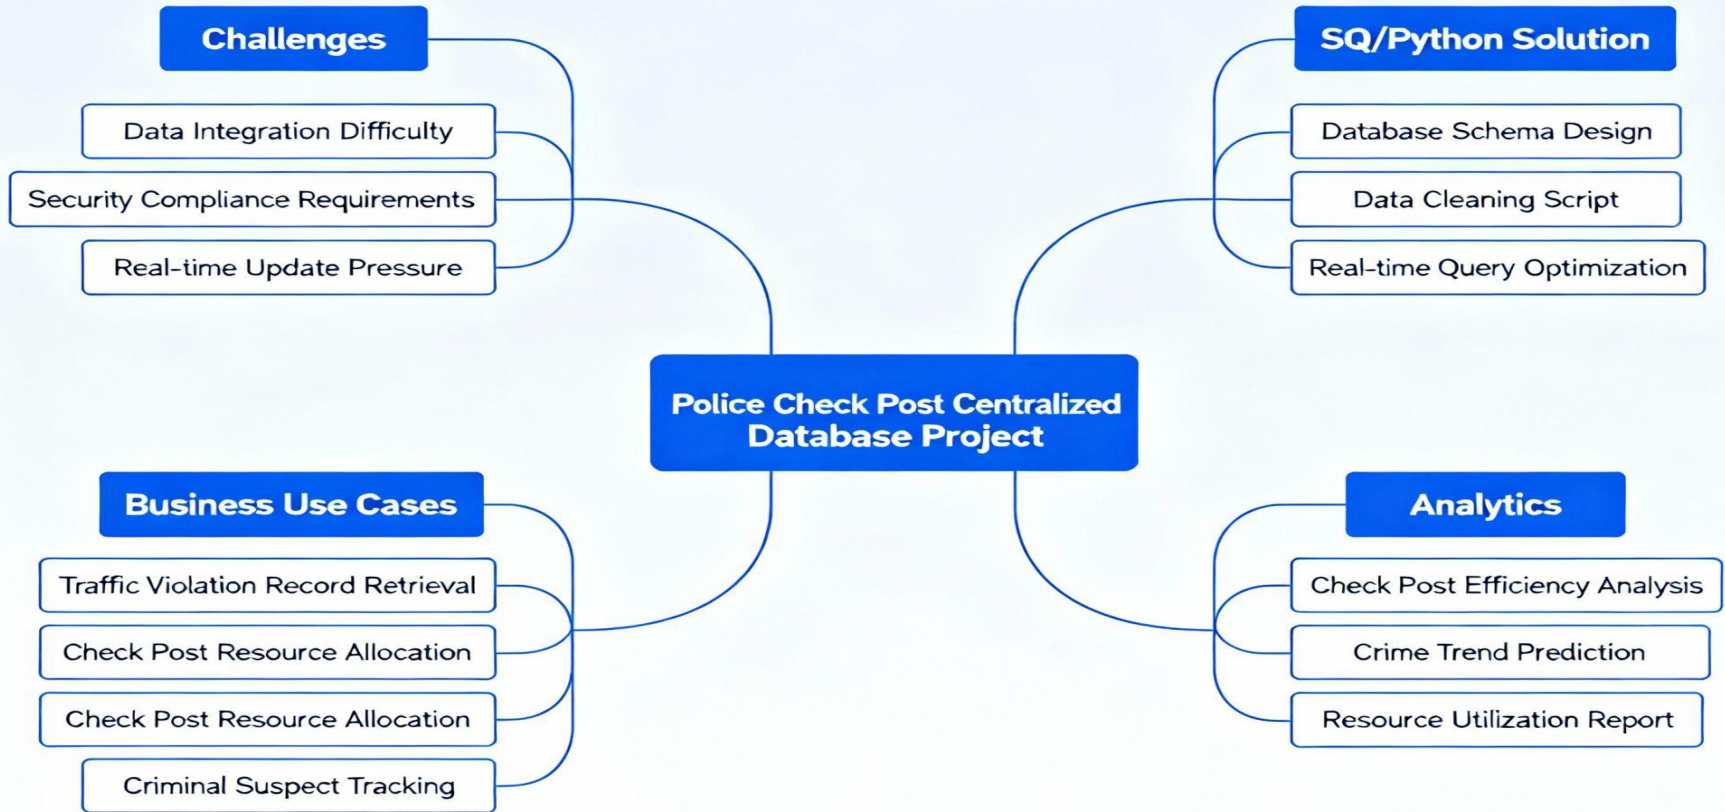

- Law Enforcement & Public Safety
- Real-time Monitoring Systems

Key Problems Addressed:

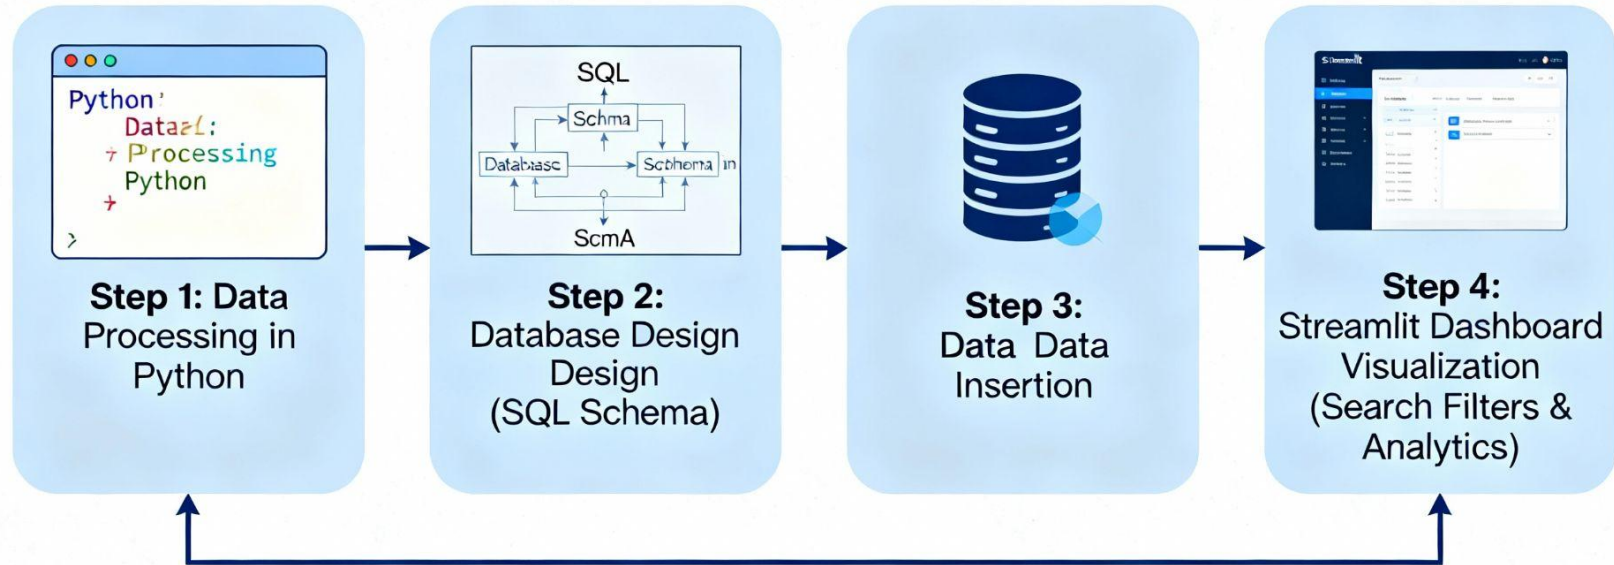

- Eliminate Manual Logging (Paper/Spreadsheets).
- Replace Inefficient Databases.

Target Output:

- Real-time Insights on vehicle flow.
- Automated Alerts for suspicious activity.

Police Stop Records Workflow

THANK YOU!!!
